Project: UPLF (Unified Profit and Loss Forecasting)
UPLF is a web application that focuses on forecasting revenue and cost for the projects based on the budget provided by the business team that are associated with the company.
It is a big application with many features that provides good experience in manual as well as automation testing. This project works on agile methodology.
Created many automation test cases for different features in the application and executed it with no escalations. Learned so much about team management and mentoring the new comers on automation as well manual testing.

Tools & Technologies:
Selenium, Java, SQL, Maven, Cucumber, Eclipse, ADO (Azure DevOps), manual testing, automation testing.

Roles & Responsibilities:
- Understanding the requirements given by BA team and preparing manual as well as automation test cases for different features in different sprint.
- Executing the test cases as per the requirement in ADO.
- Mentoring the new comers about the application and solving their doubts.
- Provides the production support for data load testing in prod environment.
- Participates in requirement discussion with internal team and giving solutions and opinions.

July 2021 - Jan 2022
Programmer Analyst
Cognizant Technology and solutions.

Project: Florida ODM - Migration to cloud
This project comes under Energy and resources domain. It provides Outage Management System (OMS) for the power company. New UI of OMS had been created and data was transferred to cloud environment.
Total of 13 applications had been migrated to cloud environment. Migration of application started from on premise to DEV environment to TEST environment then to QA environment.
Applications are related for calculating the bill, solar power, power billing etc.

Tools & Technologies:
SOAP UI, Ready API, XML, JSON, JIRA, HP ALM, Test and Defect Management.

Roles & Responsibilities:
- Tested the applications in all the environments, from DEV to TEST to QA.
- API Requests are made in XML and JSON and applications URL or Service URL are required to test the applications in Ready API.
- Tested all the applications in Ready API app and made the report off the results.

- Logs for testing and defect testing had been created and uploaded in the HP ALM tool.
- Logged the daily work on JIRA.

Sep 2020 - July 2021
Programmer Analyst
Cognizant Technology and solutions.
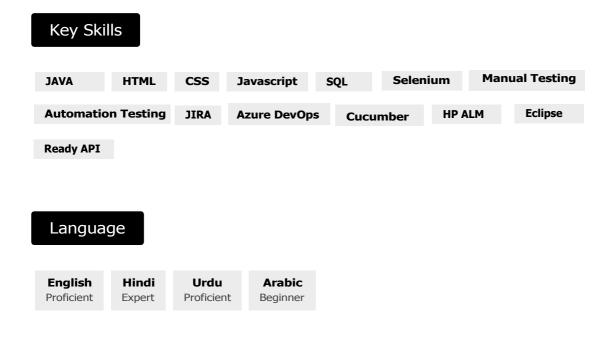

Project: PNMR - AMS Testing
PNM Resource (PNMR) official site had been updated in this project. New UI of site was created and tested along with the development. Testing was done in DEV, TEST and QA environment.

Tools & Technologies:
Manual testing, Test and defect management, Cross browser tool, HP ALM, JIRA

Roles and Responsibilities:
- Understanding the requirements given by BA team and preparing the test plan for new UI.
- Executed the test cases as per the requirement in DEV, TEST and QA environment.
- Test cases were executed in different platforms like Windows, MAC, Android, IOS. All were tested on real and latest operating systems.
- Cross Browser tool was used for mobile testing.
- Executed the test cases in HP ALM tool and logged the work hours in JIRA.
